"CITIZENS FOR CLEAN & GREEN" - CAMPAIGN PLEDGE

I pledge to begin taking the following actions to reduce my carbon footprint, to lower the impacts of my lifestyle on the environment, and to help make Roanoke a greener place to live, work and play. Commit to this pledge online in the *Clean & Green* link at *www.roanokeva.gov* or mail your contact info with the card on the back to: Ken Cronin, Department of General Services, 215 Church Avenue SW, Roanoke, VA 24011.

TIER 1 COMMITMENTS - Easy

- Participate in the city's recycling program by recycling aluminum cans, steel, clear glass, paper and plastics (#1, #2). • Recycled aluminum uses 95% less energy than virgin aluminum from bauxite ore.
- Adjust your thermostat to 78 °F or higher in summer and 68 °F or lower in winter. \circ Energy savings can be as much as 1% for each degree set higher in summer and lower in winter.²
- Replace the most frequently used incandescent light bulbs with compact fluorescent light (CFL) bulbs immediately; replace all other incandescent bulbs with CFLs as they burn out.
 - Save \$30 over the life of each CFL bulb. If every US home installed 1 CFL bulb, the energy saved would light >3 million homes/year, save >\$600 million/year in energy costs, and prevent greenhouse gases equivalent to the emissions of more than 800,000 cars.³
 - Turn off lights when not in use; unplug electronics and chargers when not in use; set computers to "power saving mode". Enabling computer power management options can save as much as 60–80% of the energy that would have been wasted.
- Maintain proper air pressure in vehicle tires. Improve fuel economy up to 3%.⁵ Save 50 100 gallons of gas per year per vehicle (over 100,000 registered vehicles in Roanoke).

TIER 2 COMMITMENTS - Moderate

- Minimize hot water use through installation of water saving fixtures and showerheads, insulating your water heater, and turning down the temperature setting on your water heater.
 - Water heating accounts for approximately 20% of total home energy use and costs an average household over \$300 a year.⁶
- Plug air leaks around windows, doors and other wall penetrations with weather stripping, caulk or insulation. Air leakage can add 10% to your annual energy bill which equates to about \$70 per year for the average home?
- Discontinue the daily use of second refrigerators.
 - 20% of all households use a second refrigerator which is typically 10 years old, uses over 1000 kWh, and costs \$100 to run 0 annuallv
- Wash clothes in cold water; dry laundry using a clothesline instead of using the dryer whenever possible. Heating water accounts for 85–90% of the energy to wash clothes. Dryers are high energy users with no Energy Star 0 models.^e
- Bike, walk, carpool or use public transportation to get to work at least once per week. • For each individual, a 5 mile roundtrip by car avoided weekly would reduce carbon dioxide emissions by about 200 lbs.¹⁰

TIER 3 COMMITMENTS - More Difficult

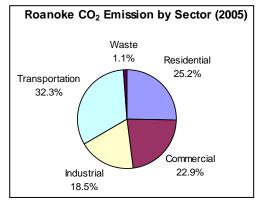

- Reduce "vampire" energy use with a "smart power strip" that senses when appliances are off.
- Vampire energy can be 5% of residential energy use; taken across all U.S. households, this wastes an estimated 65 billion kWh of electricity, costs consumers more than \$5.8 billion and emits more than 87 billion pounds of carbon dioxide each year."
- Buy a programmable thermostat and set your thermostat back overnight or when the house is empty during the day. \circ Save 5 – 10% of the energy and cost to cool/heat your house by setting the thermostat 5 – 10 degrees warmer/cooler.
- Seal and insulate ducts for air conditioning and forced air heating systems; check for adequate attic insulation levels. In a typical house, 20% of the air that moves through the duct system is lost due to leaks, holes, and poorly connected 0 ducts.
- Choose Energy Star appliances and electronic devices whenever purchasing these items. • Over 30% of all electricity use in a house is for kitchen and laundry appliances.¹⁴
- When purchasing a new/used vehicle, select models that get at least 20% better fuel economy than your current vehicle. • 30% of all greenhouse gas emissions in the US are a result of transportation.¹¹
- Measure your carbon footprint and strive to reduce it by at least 2% per year to help Roanoke meet its community wide carbon dioxide emissions reduction goal of 10% over the next 5 years.
